

## SUSTAINABILITY AND ENVIRONMENTAL POLICY

The mission of the Formula 1 rights holder (hereinafter: FOM) sustainability strategy is to ensure that the Formula 1 racing series (hereinafter: F1) achieve net zero carbon emissions by 2030, and for all F1 Grand Prix events to be sustainable and meet environmental expectations by 2025. Achieving this mission requires the active support and cooperation of all F1 participants.

HUNGARORING Sport Zrt. (hereinafter: HUNGARORING) wishes to fulfill the goals set out in the sustainability strategy of FOM and the International Automobile Federation (FIA) in line with its responsibility towards future generations. In order to achieve the goals derived from the strategy, it continuously develops its processes and management system. HUNGARORING aims to raise the awareness and knowledge of its employees, visitors, other stakeholders, and contractors who come into contact with the organization.

HUNGARORING provides the resources necessary to achieve its goals, creating an effective management system that understands and applies the principles of sustainability, particularly environmental protection, and ensures full compliance with these principles.

HUNGARORING determines and formulates the requirements derived from sustainability and, in particular, environmental protection objectives, taking into account the sustainability strategies of the FOM and FIA, as well as the applicable international and Hungarian legislation, and expects compliance with these requirements and intends to enforce them fully with all parties involved.

HUNGARORING sets measurable goals in order to fulfill the sustainability strategy outlined by FOM and FIA. These goals are designed to control the impact of environmental factors and eliminate the possibility of environmental pollution. In order to achieve these measurable goals, HUNGARORING formulates a sustainability and environmental protection plan, as well as programs for implementation, and communicates these to the parties concerned.

In order to achieve its sustainability goals, HUNGARORING defines the indicators to be used in its sustainability and environment-focused management system, which are intended to support the ESG. The seven pillars of HUNGARORING's sustainability policy until 2030: (a) increasing energy efficiency and the share of renewable energy, (b) improving waste management, (c) sustainable use and conservation of groundwater resources, (d) promoting the use of public transport in the field of transport and mobility, (e) taking sustainable criteria into account in supply chains, formulating them as requirements and communicating them to stakeholders, (f) raising awareness among visitors and employees, (g) carbon neutrality.

The management of HUNGARORING expects an understanding of the principles set out in the sustainability and environmental policy and, at the same time, full compliance with the documents used in the management system.

The management of HUNGARORING reviews its sustainability and environmental policy at least annually and updates it as necessary.
